

Description of Moorrees' stages (1963) used to identify tooth developmental stages of single rooted teeth

	ci: initial cusp formation		Ri: initial root formation with diverge edges
	Cco: Coalescence of cusps		R 1/4: root length less than crown length
	Coc: Cusp outline complete		R 1/2: root length equals crown length
a	Cr 1/2: crown half completed with dentine formation		R 3/4: three quarters of root length developed with diverge ends
	Cr 3/4: crown three quarters completed		Rc: root length completed with parallel ends
Image: Control of the	Crc: crown completed with defined pulp roof		A 1/2: apex closed (root ends converge) with wide PDL
			Ac: apex closed with normal PDL width

Description of Moorrees' stages (1963) used to identify tooth developmental stages of multirooted teeth

*	Ci: initial cusp formation		
	Cco: Coalescence of cusps		R 1/4: root length less than crown length with visible bifurcatio area
	Coc: Cusp outline complete		R 1/2: root length equals crown length
	Cr 1/2: crown half completed with dentine formation		R 3/4: three quarters of root length developed with diverge ends
	Cr 3/4: crown three quarters completed		Rc: root length completed with parallel ends
	Crc: crown completed with defined pulp roof		A 1/2: apex closed (root ends converge) with wide PDL
	Ri: initial root formation with diverge edges		Ac: apex closed with normal PDL width

Description of Moorrees' stages (1963) used to identify root resorbtion in single and multirooted teeth

	Ac: apex closed with normal PDL width	
	Res 1/4: resorbtion of apical quarter of the root	R
	Res 1/2: resorbtion of half the root	
•	Res 3/4: resorbtion of three quarters of the root	

Description of modified Bengston's stages used to identify tooth eruption

asca to laction y tooth chaption				
2)	position 1: when the occlusal or incisal surface is covered entirely by bone			
	position 2: when the occlusal or incisal surface breaks through the crest of the alveolar bone			
	position 3: when the occlusal or incisal surface is midway between the alveolar bone and the occlusal plane			
	position 4: occlusal or incisal surface is in the occlusal plane
